

Handmade Paper – Another Green Product to Save the Earth

With the aim to minimize the amount of paper waste produced by office, Eco India has created the Handmade Paper. With this project, offices particularly in India will now be able to minimize the need of paper, the possibility of cutting more trees and help save the forest. With the fact that making a single tone of paper from virgin pulp does require 17 large trees, that large number simply means that deforestation is not impossible that will eventually destroy natural habitats.

With the presence of the Handmade Paper, these unwanted acts towards our forests will be minimized dramatically. Other global benefits that the handmade paper provides include the reduced use of energy by at least fifty percent, up to ninety percent of wastewater, and air pollution reduction by seventy percent. These benefits may not be noticed immediately but in the end people will know how these green deeds affect the environment and the world.

You might wonder why this handmade paper is eco-friendly. Firstly, since it is handmade, it does use less energy in manufacturing. Next is that, these papers use non-wood raw materials, which obviously does not require the manufacturers to cut some trees, and thus, saves many trees we have in our beautiful forests. Another feature why this handmade paper is eco-friendly is the manufacturer's extensive use of solar energy, which is obviously a pollution-free method.

Aside from the green features these handmade papers have, they also boast of their quality. Compared to a mill-made paper, these papers are more tensile and are not easy to tear because of their double-fold strength.

Finally, apart from those interesting green features that the Handmade Paper has, it also has a fine and elegant quality that will surely satisfy everyone's need when it comes to paper. It is whether the users are corporate groups or students, the handmade paper will surely provide the right quality that the users may want and need. Even manufacturers can use this wonderful paper as it is also ideal in creating numerous paper products.

About the Author

The author has been following various tips, advises on how to save the earth, and wanted to share with you all. He is now one of those successful individuals who have successfully running a zero waste and zero emission lifestyle or what we call as the [eco-friendly](#) way of living.
