

Is Swallowing Semen Harmful For Health?

Semen is a seminal fluid that contains sperms. The prostate fluid which gets mixed in the semen causes odor. This odor does not come from testicular secretion. Each testis contains about 100 meter of tube in which sperms are made and transported to vas deferens. Vas deferens is one of the two muscular tubes that join the testes to the ejaculatory duct via prostate gland. It carries spermatozoa to the urethra on ejaculation aided by contraction of muscular wall. Usually 5 to 10 ml of semen is discharged containing about 50 million spermatozoa in one ejaculation. When emission occurs in rapid succession, both quantity and quality decrease.

Once sperms have become mature at the male reproductive organs, their life-span depends on where they happen to be. Fully developed sperm can be stored in the seminal vesicles for many weeks before they are reabsorbed as waste by the body. The ideal condition for the survival of sperm is a warm, moist, alkaline environment-such as found within the uterus. Here after intercourse, sperms can live for up to three days. Before ejaculation sperm's longevity can be measured in week and months.

An ordinary ejaculation may contains sugar fructose, ascorbic acid, small amount of zinc, traces of cholesterol, protein, calcium, chlorine, blood-group antigens, citric acid, deoxyribonucleic acid (DNA), vitamin B12, magnesium, phosphorous, potassium, sodium, uric acid, zinc, nitrogen, lactic acid, and several other nutrients.

If the man is healthy and free from any infection or disease, swallowing semen is absolutely harmless and might even have some nutritional value. However, swallowing semen is harmful in some cases. If the man has contacted any STDs, HIV or other sex-related diseases there is a fair chance of passing the disorder from the man to his partner.

Low Sperm Count and Low Semen Volume

Low semen production and low sperm count are common problems seen in men. This not only affects their male potency but also makes his partner unsatisfied. Low semen volume is often considered as a sign of weak manhood. Good news is that there are some high quality herbal semen volume enhancers that are specially formulated keeping in mind all your needs. Semenax and VolumePills are the most trusted and powerful natural volume enhancers. You can read the complete review on these products by visiting below links.
