

## Men Secret Butea Superba

Butea superba is a species endemic to Thailand and has been used as traditional medicine for tonic and rejuvenates time in Thailand. It is a big vine grown in association with trees. The underground tuberous root accumulate many phytochemicals that are beneficial to human health.

Chemical, survey results and academic researchers confirmed that these chemicals are not mutagenic and could induce vasodilation especially at the penis with very similar reaction to that made by Viagra but smoothly and thereby increase erectile performance.

Filtering products our company has been tested in many countries, and confirms that work in normal men and that most men with erectile dysfunction.

While commercial erectile dysfunction treatment drug is a product of great interest despite serious side effects that some are related to death, a plant-based product such as Butea superba with smooth action, but in any Security should be an alternative.

Academic Researchers and had found that Butea superba products could be in both forms, ingest product such as a health food product and a product for topical application in gel form cosmetics.

Butea Superba - Flavonoids and high-flavonoid glycosides with c-AMP Phosphodiesterase potent inhibitor

Butea Superba twinning basis of long-lived woody plant exist only in Thailand from the central and the east, west through northern Thailand. This plant species can be found in the head as Pueraria Mirifica and also the mountain region. The tubers are long annually enlarged and accumulated at least 15 chemicals in the group of direct chain organic amino acids, sterols, sterol glycosides, flavonoids and flavonoid glycosides.

Species: Due to the dispersal of the inhabitants of the plant, varies widely identified. At least cultivars have been studied and selected for commercialized plantation and were name as Butea I and II.

Chemical properties: This herb exhibit a chemical structure very similar to that of the Pueraria Mirifica herb but some chemicals are very different.

The crude extract of this plant showed a response similar to that of the male pill, Viagra. They show vasodilatation effect same as in the Viagra Tablet. Its chemicals also promote energetic body without nervous or muscular or cardiac over stimulation. That's why this product based on plants can be studied and promoted as "herbal Viagra". While commercial erectile dysfunction treatment drug is a product of great interest despite serious side effects that some are related to death, a plant-based product such as Butea Superba with smooth action, but in any Security should be an alternative. Furthermore, our researcher found that Butea Superba products could be in both forms, ingest product such as a health food product and a product for topical application in gel form cosmetics.
